

## MAINTENANCE of PROCESS PLANT EQUIPMENT

This four-day course will provide an intensive overview of relevant industry standards and practices to the maintenance of pressure vessels, heat exchangers, piping systems, and aboveground atmospheric storage tanks.

### Course Highlights

This course is unique in that it discusses all these items in a single course. This material is covered by concentrating only on the most commonly applied topics in each case, rather than attempting to discuss everything. Therefore, attendees receive broad, practical training in a single course rather than having to attend multiple courses. This maximizes their learning in a relatively short time. Those that require additional training for a particular item or topic may take a specialized course that covers it in more detail.

**Cost** is \$2,340 + GST applies Payment by Visa, cheque or purchase order.
